

Fuel Monitoring Accessory Kits

Power Telematics offer flexible fuel monitoring solutions for both diesel and LP applications. Our system allows you to choose the level of monitoring that best fits your needs. With affordable monitoring options and optional fuel accessory kits, you can track fuel levels with precision and ensure reliable generator performance.

PTK-USFS Ultrasonic Diesel Fuel Level Sensor

The PTK-USFS is a programmable plug and play device that uses ultrasonic waves to measure the approximate fuel inside a diesel tank. The sensor installs on a 1" NPT female port on top the tank and can be programmed for tanks 12" to 7'. The sensor can either be pre-programmed by Power Telematics for the height of the tank or a field programming kit can be provided for more precise calibration. The sensor connects to the ADC1 channel on the monitor wire harness and the standard kit comes in 30' cable length.

Conditions and Alerts Monitored:

- Fuel Level Below 50% Alert
- Fuel Level Below 25% Alert
- Fuel Level Below 10% Alert

PTK-LP Tank Fuel Level Monitor

The PTK-LP Tank Fuel Level monitor measures the approximate propane fuel level in any above ground or below ground tank. The monitor connects to any "Remote Ready" style fuel level gauge. Simply insert the sensor head into the slide rail and it'll start reading the fuel level. If your gauge is not Remote Ready, replacement gauges are stocked by Power Telematics in many sizes, styles, and tank types. The monitor has magnetic feet for easy mounting and includes a weatherproof enclosure. Low fuel level alerts can be customized for different levels and email notifications can even be sent to the customer's propane supplier.
